Carp

Create a carp using one of the simplest materials found in your home. All you need is an empty tissue box and Makedo re-pins and re-clips available at mymakedo.com.

This project was designed by Tanaka Satoshi, Makedo's Master Maker from Japan.

· Find · Cut · Punch · Connect

- 1 Source an empty tissue box and cut down 1/4 of the way along all four edges.
- 2 Bring the top and bottom corners together and use the point end of the Makedo safe-saw to punch a hole through the card.
- 3 Connect using a Makedo pin and clip. Repeat steps 2 and 3 on the opposite side. This should create a rounded head for your carp.

· Score · Cut · Build ·

- 4 Turn over the tissue box and use the point end of the Makedo safe-saw to lightly score two lines from the corner to the centre. Fold the score line as shown in the image.
- 5 Turn the box over and use the Makedo safe-saw to cut a slit at the end of the tissue box hole. Fold in the flaps as shown in the image. Use the Makedo pin and clip to connect the bottom corner to hold the folds made in step 4 and 5.
- 6 Create a fin at the end of the box, using the slit cut previously.

· Build · Share ·

- 7 Turn over the box and using the Makedo safe-saw, cut shapes for flippers from beneath and fold them into position.
- 8 Your Makedo carp is complete. Top it off with a tissue coming out from above as a dorsal fin. Share and upload your creation to mymakedo.com
