Emergency stool

Build a quick and portable sturdy stool perfect for outdoor occasions. All you need is a box and Makedo re-pins and re-clips available at mymakedo.com.

This project was designed by Tanaka Satoshi, Makedo's master maker from Japan.

· Find · Score · Saw ·

- 1 Source a suitable sized box tall enough as a stool to sit on.
- 2 Begin by placing the box on its side. Use the point end of the Makedo safe-saw and score from the bottom corner of the box to the centre point of the top end of the box.
- 3 Use the Makedo safe-saw and saw the center of the top flap to meet the point of where the score line meets. Repeat step 2 and 3 on the other side of the box.

· Fold · Punch · Connect ·

- 4 Where the score lines have been made in the previous step, fold the sides in as shown in the image.
- 5 As the sides fold in, the top flaps of the box should meet and create the shape of the stool.
- 6 Use the point end of the Makedo safe-saw and punch a hole on the top. Connect using a Makedo pin and clip to hold in place.

· Build · Share ·

- 7 Repeat step 6 on the other side of the box.
- 8 Your portable stool is ready to be tested out. Create different sizes, patterns and colours using different found boxes. Share and upload your creation to mymakedo.com.
